Continuation of 2. NOTE:

The insertion of "flow" for the information in claim 18 would require further search and consideration.

Continuation of 5. does NOT place the application in condition for allowance because:

The Applicant's arguments have been fully considered, but are not convincing.

The Applicant states Ravdin et al. (US 5862304) use a neural network and training method to predict future disease occurrence using sets of prognostic variables for which disease occurrence is not known. The Applicant also notes the instant invention involves determining the abnormality of a system by the use of a heretofore unknown information flow of the system which is independent of the normal changes in the dynamics of a physiological signal. While a distinction can be understood based on the Applicant's arguments, the claims claim prediction of an abnormality based on a difference in the comparison information flow and the test information flow, the information flow to read to be comparison of the various prognositic variables as they dynamically change / flow / interact, hence the art of record is deemed to read on the claims as written and the rejections of record stand. If the Applicant elects to pursue prosecution, it is suggested an RCE dynamics of the system. As an additional point, if the information flow is described as "continuous", it will clarify information flow, which without the distinction, could be read as occurring sporadically.

The Applicant states Ravdin et al. (US 5862304) and Abrams et al. (US 6117066) are not combinable because the Examiner did not explain why they are combinable. The references are deemed combinable because Ravdin et al. disclose a method to predict a medical condition (c 1, II 9-11), that medical condition being cancer or psychiatric problems (c 3, II 18-28), so appropriate therapy can be selected (c 1, II 25-28) and Abrams et al. (US 6117066) teach the treatment of psychiatric disorders (abstract), read as teaching appropriate therapy for psychiatric problems. In addition, the argument that Ravdin et al. and Abrams et al. lack motivation to combine is not persuasive since the Examiner has provided that motivation in the final rejection, Paper No.10 paragraph 5, as a way "to provide proven means to treat neurological and psychiatric disorders so that damaging and potentially fatal conditions associated with neurological and psychiatric disorders such as seizures can be identified and treated before they occur".
